The geography of evaporative opportunity

NASA POWER | July climatological-state wet-bulb depression | 2001–2025

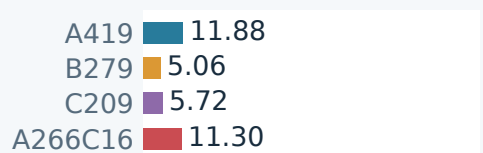

VENUE DESIGN SCENARIOS | separate from the climate background

2 Las Vegas / Fremont

38°C • RH 20% | dry desert

Scenario ΔTwb = 17.23°C

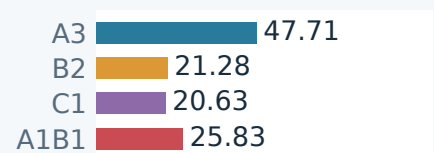

Policy: A266C16 | q = 81.8%

3 Honolulu Zoo

31°C • RH 65% | coastal

Scenario ΔTwb = 5.44°C

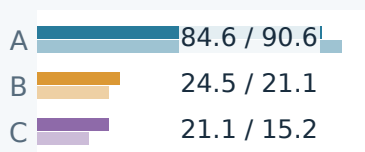

Policy: A1B1 | q = 83.3%

1 New York City

34°C • RH 30% / 70%

Task 2a | 6.50 m² | 12 people

Efficiency leader: A at both RH levels

η bars share a 0–100 scale (person·°C·h/kWh); NYC: solid 30% RH, pale 70% RH.

77 geographic samples; interpolation is regional context, not design weather or a station-observed field.
